Can a solar-wind system meet future energy demands?

Accelerating energy transition towards renewables is central to net-zero emissions. However, building a global power system dominated by solar and wind energy presents immense challenges. Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands.

Are solar and wind resources interconnected?

Theoretically, the potential of solar and wind resources on Earth vastly surpasses human demand 33, 34. In our pursuit of a globally interconnected solar-wind system, we have focused solely on the potentials that are exploitable, accessible, and interconnectable (see "Methods").

How does interconnectivity affect solar-wind development?

As the degree of interconnectivity increases, solar-wind development gradually shifts towards regions with distinct resource advantages, such as the midwestern United States for superior solar resources, and coastal or high-altitude areas for high wind energy potential (Fig. 2a,b).

What is interconnectability in offshore wind energy exploitation?

'Interconnectability' refers to the requirement that any proposed power plant must be located no farther than 10 kilometers from the existing transmission lines. Notably, offshore wind energy exploitation is confined to the exclusive economic zone.

The invention relates to a communication base station stand-by power supply system based on an activation-type cell and a wind-solar complementary power supply system.

The wind-solar-diesel hybrid power supply system of the communication base station is composed of a wind turbine, a solar cell module, an integrated controller for hybrid energy ...

The system effectively overcomes the disadvantages of limited-service locations and unstable power supply caused by seasonal barriers in traditional express cabinets.

30km wireless solar-powered communication cabinet wind and solar complementarity

In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generation ...

The solar and wind power complementary system achieves 24-hour efficient and stable power supply through intelligent coordination of photovoltaic and wind power.

The invention relates to a wind and solar hybrid generation system for a communication base station based on dual direct-current bus control, comprising photovoltaic arrays, a wind-power ...

Complementarity of renewables such as solar and wind enhances cost performance and supports stable, decentralized power supply. Incorporating energy storage further increases supply ...

Highjoule HJ-SG-D03 series outdoor communication energy cabinet is designed for remote communication base stations and industrial sites to meet the energy and communication needs of ...

A communication base station, wind-solar complementary technology, applied in the field of new energy communication, can solve the problems of inconvenience, inability to utilize wind

Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands.
