To improve efficiency, we can convert to 400Vdc (High Voltage Direct Current or HVDC), monopolar or bipolar, to enable better efficiency relative to the needs of high-power server racks.

Download our white paper, *Deploying High Power to IT Equipment Racks*, to learn about high power best practices, trends, common configurations, future industry speculation and more.

The adoption of 400V DC architecture for powering server racks in data centers represents a significant evolution in power distribution, particularly driven by the escalating demands ...

In this exclusive Q& A, Vicor contends that 400-V DC power distribution to AI racks in data centers is inevitable.

An 400V HVDC Power Rack is a modern power delivery and backup system designed to supply high-voltage direct current (HVDC) power at 400 volts (meaning +400V and -400V relative ...

Power must be transformed from the utility, most likely around 35kV down to 12V into the server chassis. The two main power distribution approaches feeding into the servers today are 400V ...

The first embodiment of this work is an AC-to-DC sidecar power rack that disaggregates power components from the IT rack. This solution improves the end-to-end efficiency by ~ 3% while ...

NetSure™ 700 Series with 400V DC Input 8V DC near the equipment loads. This lets you use existing 48V DC equipment loads while gaining the copper-saving benefit of 400V DC

Currently three companies have worked together to provide a high-level overview of the Diablo 400V architecture. The goal is to standardize items such as, high voltage connectors and ...

To increase compute density and to deal effectively with the prospect of racks that consume up to 140kW or

400V server racks for highway use

more, hyperscalers are now advocating an evolution to ±400V DC distribution to next ...
