This work proposes the model predictive control (MPC) and Proportional-integral (PI) techniques to control a bidirectional Buck-Boost converter that is utilized to exchange power between a dc ...

Engineers are exploring innovative technology that enables electric vehicles to share their stored energy with the grid. This allows thousands of EVs to send power back during peak ...

An ANFIS Bi-directional Grid Connected EV Charging station with a Battery Storage System is proposed. The proposed method provides an elegant way of combining Solar PV, GRID, as well as ...

To effectively manage the flow of energy between the battery and these loads, a bidirectional DC-DC converter is essential. This project focuses on the development and integration of such a converter to ...

This study focuses on the integration of a Smart Micro-Grid with Bidirectional DC Fast Charging, leveraging Vehicle-to-Grid (V2G) technology for enhanced energy management.

Explore how Battery Energy Storage Systems (BESS) and Bidirectional Charging (BDC) are transforming energy storage, improving efficiency, and maximizing renewable energy.

This paper presents the design and simulation of a bi-directional battery charging and discharging converter capable of interacting with the grid.

The target of this project has proposed outline for Small scale standalone micro grid that uses hybrid energy resources, for example, solar energy, wind, Super capacitor and battery energy ...

By allowing bidirectional power transmission and integrating with renewable sources including solar PV and battery storage, the technology offers a consistent means to address dynamic energy needs in ...
