Are solar and energy storage prices about to rise?

Solar and storage prices are about to rise after a year and a half of record lows, according to new data from Wood Mackenzie. Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months.

How will China's new solar policy affect the solar industry?

China's PV installations therefore remain robust, with added capacity forecast at 310 GW for 2025 - half of expected global solar installations. Wind is not as influenced by the new policy as solar and storage, due to longer lead times.

Why are solar & energy storage costs rising in Q4 2025?

Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months. That's because China is changing the rules. Wood Mackenzie points to three major drivers behind the coming spike: Polysilicon consolidation.

How much solar power has China added in 2025?

In the first quarter of 2025, China added 59.7 GW of PV, a 31% year-on-year increase. This included 23.4 GW of capacity from utility-scale solar projects, up 7% year on year, and 36.3 GW from distributed PV, up 52% on the previous year.

This financial reality raises urgent questions: What makes utility-scale storage projects so capital-intensive, and when will prices reach grid parity thresholds?

By contrast, prices for energy storage and wind turbines in China continue to decline due to oversupply, currently standing at less than half the prices seen in Europe and the United...

China's struggling solar sector faces fresh turbulence as the planned removal of a key export-tax rebate threatens to disrupt demand patterns, according to Longi Green Energy ...

Ever wondered why your neighbor's new solar setup cost half what yours did two years ago? Welcome to China's energy storage revolution, where prices are dropping faster than a TikTok ...

China solar power storage in china price

Discover data on Photovoltaic: Price in China. Explore expert forecasts and historical data on economic indicators across 195+ countries.

In recent years, China's energy storage industry has witnessed explosive growth; however, challenges such as price wars and insufficient investment returns have severely restricted ...

Bottom line is, ultra-cheap solar and storage gear is on its way out. The next phase of the energy transition will likely come with higher but more sustainable prices.

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

Global solar and storage costs are expected to increase by 9% in the fourth quarter (Q4) of 2025, as policy shifts in China will end an era of low equipment prices that has prevailed over the ...

The analysis reveals that three converging factors -- polysilicon consolidation, supply-side production cuts, and the cancellation of China's 13% VAT export rebate -- will drive solar module ...
