On 1 January 2026, an amendment to existing legislation entered into force, paving the way for compressed air energy storage as a recognised energy storage technology in Denmark. Energinet ...

They include sections on energy efficiency measures, aid for greenhouse gas emissions removal, clean mobility, infrastructure, circular economy, pollution reduction, protection and restoration of ...

Copenhagen Airport has achieved a significant milestone by installing a large battery for storing green power, making it one of the pioneering airports in Europe to do so.

The battery is designed to store surplus renewable energy during periods of high production and supply it back to the grid when demand is high, helping to balance the power grid in ...

The programme outlines a comprehensive roadmap that includes the phasing out of coal, a carbon tax for industries, and the implementation of carbon capture and storage (CCS) technologies.

When a 2022 cold snap froze wind turbines, the city's thermal storage facilities saved the day by releasing heat from summer-stored excess energy. Talk about a seasonal plot twist!

The battery energy storage system (BESS) portfolio, dubbed Everspring, targets commissioning in the spring of 2026. Copenhagen Energy reached a final investment decision (FID) ...

The government will subsidize up to 60% of the cost of installing a residential energy storage system, with a maximum subsidy of 50,000 kroner or \$5,600. The announcement follows the ...

On 30 June 2021, the Government and a broad range of parliamentary parties agreed on A roadmap for CO2 storage - first part of a CCS strategy. The agreement consists of a number of initiatives ...

## Copenhagen s latest policy on new energy storage

Danish renewable energy developer Copenhagen Energy has partnered with a local electricity and fibre network distributor Thy-Mors Energi to set up a 100MW PV and battery energy ...
