This paper presents an advanced model for dynamic and multi-stage capacity expansion planning in the microgrid integrated with electric vehicle charging station and various energy resources.

In order to solve the problem of long time and high capital investment caused by the traditional method of power capacity increase on the user side, this paper proposes a solution of ...

Here we conduct an extensive review of literature on the representation of energy storage in capacity expansion modelling.

To address the dual overload issues of bidirectional power flows in distribution transformers and lines caused by high photovoltaic (PV) penetration in distribution networks, this paper proposes a dynamic ...

Battery energy storage can provide flexibility to firm up the variability of renewables and to respond to the increased load demand under decarbonization scenarios. This paper explores how ...

To address these challenges, this paper proposes an operational and planning strategy for hydrogen energy storage in distribution networks under dynamic transformer capacity expansion ...

This study aims to demonstrate how energy storage systems can be implemented with successful integration to increase electric grid flexibility.

In our improved storage CV approach, we update the storage CV between each of the two-year solve periods to allow for the declining value of storage capacity with greater storage deployment, as well ...

This article cracks open the toolbox for energy storage device expansion - think of it as "yoga for power grids" that keeps them flexible amid renewable energy's rollercoaster ride.

# Dynamic capacity expansion of energy storage devices

In the upcoming years, load demand can be met by expanding energy resources. We can also expand the capacity of the line between the upstream network and the microgrid. The systems that store ...
