What is a battery date code chart?

A universal battery date code chart is a system used by manufacturers to indicate the date a battery was produced. The code is a series of characters printed on the battery, similar to an expiration date. Understanding the date code on a battery can be useful in determining its life expectancy. How do you read a battery date code?

How do I know if a battery has a date code?

The letter represents the month of manufacture, and the number represents the year of manufacture. The date code on U.S. Battery AGM Batteries can be found etched into the top of the battery case. It is clearly visible and usually in the format of DDMMYY or YYMMDD. This code can be used to determine the manufacturing date of the battery.

How do I know if a battery is made?

To check the manufacturing date of a battery, you need to decode the battery's date code, typically located on the battery label or etched into the casing. Most battery manufacturers use a specific format for these codes, which often include letters and numbers indicating the month and year of manufacture.

How do you know if a battery is old?

Battery manufacturers often use a standardized system to encode the manufacturing date within the battery's code. This code is typically found on the battery label or imprinted on the side of the battery casing. By understanding how to read these codes, you can determine the battery's age, ensuring that you're not using an old, unreliable battery.

In this article, we'll explore the purpose of the chart, how to read the date code, and answer some common questions about battery dates. What is a Universal Battery Date Code Chart? A universal ...
