Renewable energy is projected to account for 40-50% of Japan's power generation by 2040, which would surpass thermal power as the largest power source. Specific goals include ...

Under the new energy strategy, nuclear power will provide 20% of Japan's energy supply by 2040. While policymakers argue that nuclear energy is necessary for a stable and low-carbon energy mix, critics ...

The composition of power sources in FY2040 is set at 40%-50% renewable energy, 20% nuclear power, and 30%-40% thermal power. The breakdown of renewable energy is 23%-29% solar ...

On February 18, 2025, the seventh and most recent Strategic Energy Plan was published. Part 1 of this article highlights the challenges Japan is facing in terms of energy as well as ...

The new proposal says nuclear energy should account for 20% of Japan's energy supply in 2040, up from just 8.5% last year, while expanding renewables to 40-50% from 22.9% and reducing...

Despite strategic intention to revitalize nuclear energy alongside renewables, the continued restart of nuclear power plants faces challenges like rising safety costs, delayed approvals and wavering public ...

The power generation mix in the approved 7th Strategic Energy Plan requires large amounts of hydrogen, ammonia, and CCS to decarbonize thermal power generation, which is to ...

Below, we examine policies affecting generation from non-fossil fuel sources, namely renewable sources and nuclear generation in the first part of a two-part series on Japan's energy ...

Japan wants renewable energy to account for up to 50% of its electricity mix by fiscal year 2040 with nuclear power taking up another 20%, according to a draft of its revised basic energy...

Japan's new energy plan now expects coal and gas to contribute as much as 40% of the generation mix by

Japan s new energy power supply

2040, rising to 45% in the "Slow Technological Progress" scenario. Japan will be in ...
