USDA is an equal opportunity provider, employer, and lender. This report examines land cover and land cover change associated with utility-scale solar and wind development in rural areas from 2009-20.

Solar and wind resources vary across space and time, affecting the performance of renewable energy systems. Global land-based complementarity between these two resources from 1950 ...

Over 30 percent more land would be needed in the Western US by 2050 to support new solar and wind infrastructure under a high renewables penetration scenario compared to a business ...

Over 30 percent more land would be needed in the Western US by 2050 to support new solar and wind infrastructure under a high ...

Abstract and Figures This work reviews over 100 academic studies and U.S. government reports on the land use impacts of solar and wind power.

The study underscores some important differences in how solar and wind projects affect land use. While both types of developments require significant land areas, they do so in very different ...

Let's explore how solar energy is reshaping the way we power our communication networks and how it can make these stations greener, smarter, and more self-sufficient.

USDA, Economic Research Service researchers recently studied how solar and wind development affects land cover near wind turbines and solar farms. They found that cropland or ...

To strengthen community grids and improve access to electricity, this article investigates the potential of

Land for wind and solar complementary use of rural solar-powered communication cabinets

combining solar and wind hybrid systems. This is viable approach to address energy ...

In order to improve the utilization efficiency of wind and photovoltaic energy resources, this paper designs a set of wind and solar complementary power generation ...
