Acting as a large-scale energy storage system, it provides backup power during periods of high demand and stores energy when renewable sources like solar and wind are not generating electricity.

A firm in China has announced the successful completion of world's largest vanadium flow battery project - a 175 megawatt (MW) / 700 megawatt-hour (MWh) energy storage system.

The country's mountainous terrain and limited grid coverage make energy storage batteries essential for maintaining uninterrupted telecom services. Let's examine how modern battery technologies are ...

On 1 September 2025, Electricity of Laos Generation Public Company (EDL-Gen) signed an agreement with private firms from Singapore to develop a pumped-storage hydropower (PSH) project in Sekong ...

Together with the Government of Laos, EDF signed a memorandum of understanding to undertake the feasibility studies for a Pumped Storage Hydropower project located nearby Nam Theun 2, with an ...

With Thailand and Vietnam watching closely, Laos' storage initiatives could potentially reshape regional energy dynamics. The country's strategic location as a power hub positions it to export not just ...

An energy storage mechanism is introduced to stabilize power generation by charging the power storage equipment during surplus generation and discharging it during periods of insufficient ...

With 80% of its electricity already coming from renewables (mostly hydropower), Laos is now betting big on energy storage solutions to juice up its regional influence. But how did this ...

With abundant hydropower resources and growing demand for grid stability, energy storage solutions are becoming critical. This article explores how many energy storage power stations exist in Laos ...

Laos electrochemical energy storage power station

French energy giant EDF is planning the construction of a 240 MW floating solar power plant at the Nam Theun 2 Hydropower plant on the Nam Theun River, in Laos..
