---

Concerns about safety and potential battery fires are leading residents in several U.S. localities to oppose and enact moratoriums on energy storage projects.

But as more energy storage is added, residents in some places are pushing back due to fears that the systems will go up in flames, as a massive facility in California did earlier this year.

More than 20 GWh of planned energy storage cell production capacity, for 2028, has been cancelled this year according to Q2, 2025 reports on energy storage supply, technology, policy, and ...

A battery storage system in Moss Landing, California caught fire in January, sending plumes of toxic smoke into the atmosphere and forcing the evacuation of about 1,500 people.

The global market for lithium-ion batteries is expected to remain oversupplied through 2028, pushing prices downward, as lower electric vehicle production targets in the U.S. and Europe...

A maze of options leads to back lithium-ion batteries for plug-in cars, stationary storage, and advanced electronics until at least 2025, according to a new study from Lux Research.

Lithium-ion batteries are increasingly being used to store power for electrical grids, but some localities are concerned about fire risks.

As the global energy transition accelerates, lithium-ion batteries have become the cornerstone of both electric mobility and stationary energy storage. Yet, this massive growth in ...

Let's catch up on what happened in this fire, what the lingering concerns are, and what comes next for the energy storage industry.

## Lithium batteries kicked out of energy storage companies

Let's cut to the chase: energy storage companies are closing down faster than phone batteries at a TikTok convention. In 2023 alone, over 15 grid-scale storage startups filed for ...
