On January 9, 2025, the "Energy Storage No. 1" global first 300-megawatt compressed air energy storage demonstration project, invested and constructed by China Energy Engineering Group Co., ...

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.

A new long duration energy storage system that deploys molten tin for heat transfer has received \$20 million in Series A Plus funding.

In 2026, ONE is shifting focus away from EVs toward surging demand in grid storage, rail and defense. ONE has retooled our Michigan manufacturing footprint to deliver high-performance ...

Sodium batteries may have just crossed a critical threshold, moving into high-voltage territory and opening a realistic path toward sustainable, low-cost energy storage. Unlike conventional ...

Because lithium-ion cells are costly, this makes scaling these systems for multi-day energy storage completely uneconomical. In concept, Noon's ability to independently scale energy ...

Bloomberg New Energy Finance (BNEF) has released its Q4 2025 Global Energy Storage Tier 1 List, and Desay Battery has once again secured a place on the list. This marks its ...

This Review discusses the application and development of grid-scale battery energy-storage technologies.

A new rechargeable lithium-air battery potentially has four times greater energy density than a traditional lithium-ion battery.
