In November 2023, ZF began developing its modular range extender system "eRE" -- which includes an electric motor, inverter with software and planetary gearset - at its tech center in Shanghai. The ...

One solution to the range anxiety issue is the use of range extenders, which are devices that provide the vehicle with additional energy to complement the primary battery.

Fuel Cell Range Extenders are more powerful than Battery Range Extenders, and they can provide a longer range. This growth is being driven by the increasing demand for electric vehicles, as well as ...

In these cases, range extenders can be one solution: A combustion generator that is coupled to an electric motor and thus generates energy for the vehicle battery. ZF is now introducing ...

The new Belize Energy Resilience and Sustainability Project will deploy state-of-the-art battery energy storage systems across four strategic locations in the country, marking a significant step forward in ...

The authors considered range extenders as the solution to free battery EVs from the "range anxiety" issue and lower the vehicle weight and capital costs by downsizing the ...

Its new modular range-extender systems, dubbed eRE and eRE+, are due to enter production in 2026 -- and they could help keep internal combustion alive in a way that actually ...

The system features a new transmission with two integrated motors that can be paired flexibly with internal combustion engines across the Hyundai line-up, delivering a system output from ...

This ESS battery cabinet is a reliable, high-performance, and safe energy storage solution suitable for a wide range of applications. With its advanced features, modular design, and ...

Production of new energy range extender battery cabinet

German tier 1 supplier ZF will introduce the next generation of its range extender technology for electric vehicles (EVs), with volume production beginning in 2026.
