Why is China accelerating the market-oriented reform of its renewable power pricing system?

BEIJING, Feb. 10 -- China is accelerating the market-oriented reform of its renewable power pricing system in a bid to build a new power system and promote the sustainable development of renewable energy generation.

Will a spot price limit increase energy storage returns?

The Notice suggests "improving spot market trading and pricing mechanisms," which is expected to enhance returns for energy storage projects by relaxing spot price limits.

How will China's new energy pricing policy affect the future?

"This new pricing policy will significantly accelerate the construction of a modern power system and ensure the sustainable development of renewable energy," said Zhang Dayong, deputy secretary-general of the China Association for the Promotion of Industrial Development.

Is market-based pricing ripe for power generation reform?

Conditions are now ripe to shift to market-based pricing, analysts said, citing falling power generation costs and an evolving market and predicting that the reform will enhance industry efficiency and ensure sustainable high-quality growth.

In several regions, there are substantial opportunities for reforms that will enable energy storage to participate in boosting the reliability and resilience of our power grid - while also ...

China's solar and wind farms would no longer be guaranteed sales at a fixed price linked to coal benchmarks, under a new policy released by the central government. The policy asks local ...

China is accelerating the market-oriented reform of its renewable power pricing system in a bid to build a new power system and promote the sustainable development of renewable energy ...

On January 30, 2026, National Development and Reform Commission (NDRC) and National Energy Administration (NEA) jointly issued Notice on Improving Generation-side Capacity ...

Key Points China's new electricity pricing mechanism, introduced in January 2026, represents a fundamental

Reform of energy storage pricing mechanism accelerates

shift to compensate power plants based on their role in grid stability amidst ...

We identified 5 priority reforms in the following target markets: MISO, NYISO, and PJM. Among an array of reforms considered, these unlock the largest value at scale while exhibiting a feasible policy and ...

By redefining battery economics and reshaping the valuation of clean energy contracts, the reform accelerates the transition to a more efficient, resilient, and integrated grid.

In this paper, a novel leasing pricing mechanism is proposed to minimize the operating cost of DNs and increase the revenue of ESS by flexible energy storage application.

The Notice suggests "improving spot market trading and pricing mechanisms," which is expected to enhance returns for energy storage projects by relaxing spot price limits.
