Our work spans a diverse range of technologies including advanced lithium and sodium-ion battery chemistries, flow batteries, thermal energy storage, second-life EV batteries, and direct air capture ...

Explore UC San Diego's state-of-the-art energy research labs, microgrid, and testing facilities for energy storage, grid integration, and renewable technologies.

The Gateway Energy Storage project recently launched in San Diego County, California, has been crowned as the largest battery energy storage system in the world.

SDG& E's utility-owned battery storage portfolio is expected to reach nearly 480 MW of power capacity and over 1.9 GWh of energy storage by year-end, including the Westside Canal ...

Homes and businesses are the source of electricity demand and locating battery storage systems near them efficiently addresses congestion and grid strain while postponing costly upgrades like new ...

SDG& E has been rapidly expanding its battery energy storage and microgrid portfolio. We have around 21 BESS and microgrid sites with 442 megawatts (MW) of utility-owned energy storage and another ...

This project includes installation of two lithium-ion battery storage systems to provide a total of 20MW, or 80MWh, of battery energy storage to our local grid.

UC San Diego is partnering with Redoxblox to demonstrate a 10 MWh thermochemical energy storage system, providing 24+ hours of emergency power and carbon-free cooling for ...
