Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

Why is Syria rehabilitating its energy sector?

The rehabilitation of Syria's energy sector has emerged as a top priority for the Syrian Transitional Government (STG) as it works to restore essential services, stabilize the economy, and pave the way for national reconstruction.

What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Türkiye have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Türkiye is also connecting its grid to Syria.

Why does Syria have a low electricity supply?

The war has seen a drop in electricity generation capacity from 8 500 Megawatts to just 3 500, primarily due to the destruction of key power plants including Mahardah, Aleppo and Zayzoun. The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state.

In late May 2025, the Syrian government signed a memorandum of understanding with a consortium led by Qatar's UCC Holding to develop major power generation projects worth ...

In the heart of the Middle East, Syria is quietly making waves with its groundbreaking energy storage project - a \$120 million initiative aiming to stabilize the national grid while integrating solar farms ...

By providing a stable, uninterrupted power supply and significantly reducing diesel consumption, our system helps customers lock in energy cost advantages, improve operational predictability, and ...

Well, there you have it - Syria's energy future isn't about choosing between survival and sustainability. With

Syria industrial park energy storage project

smart storage solutions, it can achieve both simultaneously.

Rehabilitating Syria's energy sector is central to its economic revival. Restored power will benefit households, where electricity access in Damascus is currently limited to three hours a day, ...

This project consists of six battery energy storage systems that can collectively store 400 MWh of electricity, sufficient to supply power to 600,000 homes for two hours.

In the short to medium term, it should support energy generation in Syria, especially in renewable electricity. In the longer term, it should offer Syria a role in an interconnected Eastern ...

According to Power Technology, Syria recently reached a \$7 billion agreement with a consortium consisting of Qatar, Turkey and the United States to develop a 5 GW gas and solar project, ...

This transformative deal, led by Qatar's Urbacon Holding alongside a global consortium, promises to reshape Syria's energy landscape, create jobs, and lay the foundation for long-term ...

This Syrian solar energy storage case study shows how combining advanced Axpert inverters with M90 PRO lithium batteries provides a practical, reliable, and scalable solution.
