Yup, that's perfectly normal. Basically the inverters that convert the DC battery power to AC power for your devices are noisy, and you're hearing either 60Hz hum or harmonics thereof. ...

Our V series battery pack is designed to provide safe, high-performance energy storage solutions for a variety of applications. The compact and easy-to-install battery pack can be used as a basic building ...

This noise comes from the battery charging circuit, and it's not necessarily abnormal. The newer APC UPS models use a "switching" or pulsed approach to charging the battery, and ...

Unusual battery sounds, such as hissing, popping, or sizzling, are not merely annoying--they are red flags signaling potential safety hazards. These noises often indicate internal ...

In this article, we will help you understand why your lithium-ion battery makes noise and how to get rid of those annoying noise. Your lithium battery should never hiss, but if you hear a ...

A laptop battery should not make sounds. If you hear ticking or popping, it may mean the battery is expanding, posing a fire hazard. Stop using the laptop immediately. Seek professional help ...

A high-pitched noise that sounds like squealing is bad. In some cases, you can blame it on the battery charging circuit, especially if you have battery backups that use switching to charge the battery.

When the battery storage system cabinets become overheated, it causes a potential safety issue since the batteries inside may degrade or even catch fire -- this is something we absolutely ...

Hearing noise from a battery requires immediate assessment. Diagnose if the sound is internal chemistry, an external charger issue, or a sign of failure.
