What is Uruguay's energy strategy?

In 2005, Uruguay initiated a dramatic shift in its energy strategy, moving from petroleum-based electricity generation to renewable sources. In 2024, Uruguay generated 99 percent of its electricity from renewable sources using hydropower (42 percent), wind (28 percent), and biomass (26 percent).

How much electricity does Uruguay produce?

The results speak for themselves. Today, Uruguay produces nearly 99% of its electricity from renewable sources, with only a small fraction--roughly 1%-3%--coming from flexible thermal plants, such as those powered by natural gas. They are used only when hydroelectric power cannot fully cover periods when wind and solar energy are low.

How much solar energy does Uruguay get?

Uruguay receives an average 1,700 KW per square meter of sunlight a year, on par with Mediterranean countries although solar represents only a fraction of the country's total electricity production. Uruguay's Investment Promotion Law offers incentives for investing in solar manufacturing, systems implementation, and solar energy utilization.

How much energy does Uruguay produce in 2024?

According to preliminary 2024 data from Uruguay's Ministry of Industry, Energy and Mining (MIEM), national energy production reached 17,202 GWh, marking a rebound from the downward trend observed in 2023. Of the total production, 15,175.8 GWh was used to meet domestic demand, while 2,026.2 GWh was exported.
