What is Vienna rectifier power topology?

The Vienna rectifier power topology is used in high-power, three-phase power factor correction applications such as offboard electric vehicle (EV) chargers and telecom rectifiers. Control design of the rectifier can be complex. This TI Design illustrates a method to control the power stage using C2000™ microcontroller (MCU).

What is a Vienna Rectifier?

Though many topologies exist for active three-phase power factor conversion, a Vienna rectifier is popular due to its operation in continuous conduction mode (CCM), inherent multilevel switching (three level), and reduced voltage stress on the power devices. Traditionally, hysteresis-based controllers have been used for Vienna rectifiers.

What is a Y-connection Vienna Rectifier?

A Y-connection Vienna rectifier is implemented in this TI Design. With this design the aim is to provide an example of how to control a Vienna rectifier and how to tune the different loops using the C2000 MCU. The three-phase Vienna rectifier key power specifications are given in Table 1. Table 1. Key System Specifications

Does sine triangle PWM work for Vienna Rectifier control?

Only recently have sine triangle-based PWM been shown to work for Vienna Rectifier control. This control can be quite challenging to design. Several variants of Vienna rectifiers exist, Figure 1 shows the variant of the Vienna rectifier chosen in this design along with the key voltages and currents being sensed.

This paper benchmarks three topologies--the Vienna rectifier, the symmetrical boost PFC and the neutral boost PFC--for the purpose of comparison. To this end, it factors two of the industry's key ...

Industrial power inverters are a great choice for mining operations because they provide scalability and flexibility. Their modular design allows for easy expansion or reconfiguration of the ...

The STDES-VRECTFD reference design represents a complete solution for high-power, three-phase active front end (AFE) rectifier applications based on the three-level Vienna topology.

There is the option of switching the load to the bypass mains or to the inverter output, thanks to the manual bypass which is also housed in a 1/5, 19" rack module.

Topology Comparison Efficiency Comparison @ Pout=20 kW Vienna rectifier Type 2 ... Simulated efficiency @ Tj= 125°C, considering only semiconductor losses.

The purpose of this article is to present possible solutions that can be used by mining companies for the mining and processing of stones for civil construction using WEG frequency inverters.
