What is the best type of generator for construction sites?

The best type of generator for construction sites is one that meets all your power needs without any problems. There are four common types of generators used on construction sites: high-powered generators, medium-powered generators, standby generators, and portable generators.

Can a generator be used on a construction site?

Yes, a generator can be used on a construction site. For construction sites, it is recommended to use a capacitor-style generator due to its sufficient power level for power tools and air compressors. Even though it would not be recommended for powering electronics. The difference between generators' 'cleanness' can be found on sine-wave charts.

How do I choose a construction generator?

To choose a generator for a construction site, consider generators that provide enough power to run at 70% to 90% capacity. When sizing a construction generator, you'll need to consider various factors to ensure the right size for your needs.

What is a medium power generator?

Medium power generators are used for medium-sized construction sites, such as house or apartment construction. They are an effective solution for medium power needs. Standby generators are useful if there is an issue with the main power supply, and portable generators allow you to draw power to all areas of the job site, making them more convenient than some other types of generators.
